MEGATRON® MODEL 6N, 6N-LF, 6NB-LF

INSTALLATION ADJUSTMENT SERVICE COMPLETE WATER TEMPERATURE CONTROL STATION

IMPORTANT! Provide serial numbers for both valves when ordering parts!!
Small valve manufactured after July 2007 starting with serial # TM26272

1. Type TM manifold systems are factory pre-assembled and tested and include large and small thermostatic water mixing valves which function as a system to meet both high and low demand for tempered water.

2. System should be installed at a location where it can easily be cleaned, adjusted or repaired.

3. System supplies must be connected as shown (Hot-left, Cold-right). Connect return piping as shown. Exercise caution when soldering.

4. Flush pipes thoroughly after system has been connected.

5. Refer to page 3 & 4 of this bulletin for correct Setup Instructions.

Maximum Operating Pressure 125PSI (860kpa) for Hot and Cold Water

CAUTION

All thermostatic water-mixing valves have limitations. They will not provide the desired accuracy outside their flow capacity range. Consult the capacity chart on page 8. Minimum flow must be no less than as shown.

REMEMBER! THIS IS A CONTROL SYSTEM WHICH MUST BE CLEANED AND MAINTAINED ON A REGULAR BASIS (SEE MAINTENANCE GUIDE AND RECORD MGR-1000).

**ADJUSTMENT AND SERVICE**

Leonard Type TM Thermostatic Water Mixing Valves are simple in design and may be easily cleaned, adjusted and repaired. If the installation is accessible, servicing may be completed without disconnecting the valves.

**NOTE:** High Low Manifold Systems include Thermostatic Water Mixing Valves, which must be regularly maintained to provide best performance. Frequency of cleaning depends on quality of local water conditions and usage. See Maintenance Guide and Record MGR-1000

---

**WARNING**

These mixing valves are equipped with an adjustable high temperature limit stop factory set at approximately 120°F (49°C) with an incoming hot water supply temperature of 150°F (65.5°C). If the hot water supply temperature of the job is greater than 150°F (65.5°C), the valves when turned to full HOT will deliver water in excess of 120°F (49°C) and the limit stop **MUST BE RESET BY THE INSTALLER!**

**TO RESET ADJUSTABLE HIGH TEMPERATURE LIMIT STOP:**

<table>

<tbody>
<tr>
<td><img src="image" alt="Diagram" /></td>
<td><img src="image" alt="Diagram" /></td>
</tr>
<tr>
<td>1. Loosen LTR screw</td>
<td>1. Loosen LTR Set Screw, remove POINTER SCREW.</td>
</tr>
<tr>
<td>2. Remove SNAP CAP, SCREW &amp; WASHER, Remove POINTER.</td>
<td>2. Adjust POINTER to maximum desired temperature.</td>
</tr>
<tr>
<td>3. Temporarily place POINTER on the spline rod, turn RIGHT for warmer temperature, turn LEFT for cooler temperature. When valve is delivering warmest temperature desired, remove the pointer.</td>
<td>3. Remove POINTER, replace POINTER on spline rod with STOP (which is cast into the underside on the pointer), resting against the BOTTOM side of the WEB on the FINE ADJUSTMENT SCREW.</td>
</tr>
<tr>
<td>4. Replace POINTER on the spline rod so that its RIGHT edge is resting against the STOP SCREW located on the RIGHT SIDE OF THE COVER.</td>
<td>4. If fine adjustment is needed, adjust FINE ADJUSTMENT SCREW on the cover, loosen for hotter or tighten for cooler temperature.</td>
</tr>
<tr>
<td>5. The new maximum temperature has now been set. Test this temperature by holding a thermometer under the flow of water to be certain it is as desired.</td>
<td>5. Replace POINTER and check temperature, if set to desired temperature replace POINTER SCREW, and tighten LTR SET SCREW.</td>
</tr>
<tr>
<td>* LIMIT STOP MUST BE RESET AND RECHECKED EACH TIME HANDLE IS REMOVED.</td>
<td>* LIMIT STOP MUST BE RESET AND RECHECKED EACH TIME HANDLE IS REMOVED.</td>
</tr>

</table>

---

**IMPORTANT! ALL MIXING VALVES MUST BE SET AT THE SAME OPERATING TEMPERATURE.**

**SEE PAGES: 6 & 7 FOR COMPLETE PARTS BREAKDOWN**

Check for significant variations in outlet flow. Thermostatic valves will NOT provide the desired accuracy outside of their flow capacity range. Minimum flows must be no less than shown (see Flow Capacities, page 8).

If installed on a recirculated hot water system, make certain the valve is piped according to Leonard’s Required Piping Method (see page 4).

**REMEMBER! THIS IS A CONTROL DEVICE WHICH MUST BE CLEANED AND MAINTAINED ON A REGULAR BASIS. (SEE MAINTENANCE GUIDE AND RECORD, MGR-1000).**
1. The High-Low Unit MUST be piped according to Method #5 (see page 4).

2. Make sure full hot and cold supplies to this assembly are operating. The temperature of the hot water source must be properly set and maintained.

3. The circulator (if used) must be turned OFF before setup.

4. Turn on enough fixtures for a flow of at least 30 GPM (114 l/min.) downstream from this system. Make sure each fixture is set to deliver full "HOT" water.

5. Close outlet Valve V3 at the smaller Type TM Valve

6. Make sure Valve V4 at the large Type TM Valve is in the full open position.

7. Set outlet temperature of the large Type TM Valve to the required level.

8. Open outlet Valve V3 at the small TM Valve.

9. Shut outlet Valve V4 at the large TM valve.

10. Turn off enough fixtures for a flow of at least 2 GPM (7.6 l/min) downstream from this system.

11. Make sure each fixture is set to deliver full "HOT" water.

12. Set outlet temperature of the small TM valve to the same temperature as the large TM Valve.

14. See page 4 to balance recirculated system.
PROCEDURE TO BALANCE CIRCULATION SYSTEM

1. MAKE SURE NO WATER IS BEING DRAWN IN THE BUILDING. OPEN BALANCING VALVE #1 APPROXIMATELY HALF WAY AND START CIRCULATOR. KEEP BALANCE VALVE #2 CLOSED AT THIS TIME.

2. OBSERVE TEMPERATURE UNTIL IT STABILIZES.

3. CLOSE BALANCING VALVE #1 SLIGHTLY IF TEMPERATURE IS TOO HOT, OR OPEN IT SLIGHTLY IF TEMPERATURE IS TOO COLD. ALLOW TEMPERATURE TO STABILIZE, REPEAT UNTIL DESIRED CIRCULATION TEMPERATURE IS SET.

4. IF UNABLE TO REACH DESIRED TEMPERATURE WITH VALVE #1 IN THE FULL OPEN POSITION, OPEN BALANCE VALVE #2 IN SMALL INCREMENTS (i.e. 1/8, ¼, 3/8, ETC) UNTIL DESIRED TEMPERATURE IS ACHIEVED.
INSTRUCTIONS FOR SERVICING LARGER TM VALVE

1. Loosen LTR set screw.
2. Remove snap cap, screw and washer, friction spring and pointer.
3. Turn off hot and cold supplies at screwdriver checkstops. Remove M20-2C cover screws to release cover and thermostatic control assembly.
4. To clean port sleeve assembly, (the thimble must move freely on the port sleeve): unscrew the check nut as far as it will go, then screw the port sleeve nut into the base. The port sleeve and thimble may be lifted out. SEE DWG "A".
5. Clean in a non-corrosive cleaning solution. DO NOT USE ABRASIVES!

6. To clean thermostat group, remove coil sleeve stud and take off thermostat group.
7. Clean in a non-corrosive cleaning solution.
8. When reassembling, make sure driving ball of thermostat group engages the ball socket of the port sleeve assembly.

TROUBLESHOOTING INSTRUCTIONS
Note: Provide valve serial number when ordering parts for either valve!

| PACKING & GASKETS | Leaks at stem. Leak between valve cover and base. |
| PORT SLEEVE/BRIDGE ASSEMBLY | Valve delivers either all hot or all cold water, or will not mix consistently. |
| THERMOSTAT GROUP | After cleaning or replacing port sleeve/ bridge assembly, valve performance is not consistent. |
| CHECKSTOPS | Hot water by-pass into cold line (or cold into hot). Supplies cannot be shut off completely. Supplies leak at checkstop bonnets. |

LIMITED WARRANTY

Leonard Valve Company (hereinafter, “Leonard”) warrants the original purchaser that products manufactured by Leonard will be free from defects in material or workmanship under normal conditions of use, when properly installed and maintained in accordance with Leonard’s instructions, for a period of one year from the date of shipment. During this period, Leonard will at its option repair or replace any product, or part thereof, which shall be returned, freight prepaid, to the Leonard factory and determined by Leonard to be defective in materials or workmanship. Leonard provides no warranty, express or implied, which extends beyond the description contained herein. LEONARD SPECIFICALLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE. Nonetheless, some jurisdictions may not allow the disclaimer of certain implied warranties, in which case Leonard hereby limits such implied warranties to the duration of the limited warranty period contained herein. Some jurisdictions may not allow limitations on how long an implied warranty lasts, so the foregoing durational limitation may not apply to you. In no event will Leonard be liable for labor or incidental or consequential damages. Any alteration or improper installation or use of this product will void this limited warranty. If any provision of this limited warranty is prohibited by law in the applicable jurisdiction, such provision shall be null and void, but the remainder of this limited warranty shall continue in full force and effect.
