EMERGENCY MIXING VALVES

ECO-MIX™

Exposed Assembly for Drench or Combination Emergency Shower
3 - 56 GPM (11 - 212 l/min) flow rate
up to 45 PSI (3.1 bar) system pressure drop

TM-800-LF

ASSE 1071 Certified
CSA Certified
__TM-800-LF

EMERGENCY WATER MIXING VALVE

- DURA-trol® solid bimetal thermostat directly linked to valve porting to control the intake of hot and cold water and compensate for supply temperature and pressure fluctuations DURA-trol® is highly responsive and cannot be damaged by extremes in temperature
- Thermostatic Mixing Valve can be set to the correct temperature for the application
- Locking type temperature regulator to prevent accidental movement set for 85°F (29°C)
- Mixing valve will close down on failure of cold water supply
- Mixing Valve with special internal cold water bypass capable of 20 GPM (76 l/min) @ 30 PSI (2.1 Bar) upon failure of hot water supply
- Adjustable high temperature limit stop * set for 90°F (32°C)
- Full 1” top or bottom inlets and 1 ¼” top outlet
- Integral wall support
- Dial thermometer (range 0 to 140°F, -10 to 60°C)
- Rough bronze finish
- Union angle checkstops on inlets
- Compliance……….ANSI Z358.1
- Maximum supply temperature 180 °F (82°C)
- Maximum supply pressure 125 PSI (8.6 Bar)

OPTIONS
__ CP- Chrome plated finish
__ IT- Inlet thermometers (range 0 to 140°F, -10 to 60°C)

NOTE: Performance specifications above applicable when valve is tested to conditions specified per ASSE 1071

+NOTE: The valve will maintain temperature with 0.5GPM flow from the domestic hot water loop when properly installed near the hot water source with a continuously operating recirculation pump.

WARNING: This product can expose you to chemicals including lead, which is known to the State of California to cause cancer. For more information, go to www.P65Warnings.Ca.gov

This product is certified to meet Low Lead requirements of wetted surface area containing less than 0.25% lead by weight

Engineer's Approval

Job # ___________________

Arch/Eng. ________________

Contractor ________________

CAUTION! All thermostatic water mixing valves have limitations. They will NOT provide the desired accuracy outside of their flow capacity range. Consult the Flow Capacity Chart and DO NOT OVERSIZE. Minimum flow must be no less than as indicated.

*NOTE: A limit stop, set for 90°F (32°C), is simply a mechanical setting to prevent excessive handle rotation. If incoming water is hotter than 135°F (57°C), the temperature of the factory test, the valve when turned to full HOT may deliver water in excess of 90°F and the limit stop MUST BE RESET BY THE INSTALLER.
CAUTION! It may be necessary to recirculate the tempered water to the emergency shower should the piping be exposed to excessive hot or cold conditions. Consult factory for proper piping.

The Emergency eye/face wash Mixing Valve shall control and maintain the temperature of the water to the station. Unit shall be self contained and include a thermostatic water mixing valve, a dial thermometer on the outlet, union angle check stops, wall mounting bracket, piping and fittings factory assembled and tested, top or bottom inlets and top outlet, unit set for 85°F (29°C) and a maximum temperature of 90°F (32°C). Unit must be able to be set to the correct temperature for the specific contaminant but must be locked in place to prevent changing of the temperature by accident. Unit must be checked weekly for performance in conjunction with the requirements of ANSI Z358.1. Unit shall be able to flow a minimum flow of 20 GPM (76 l/min) at 30 PSI (2.1 Bar).

WARNING! IT IS THE RESPONSIBILITY OF THE SPECIFIER TO DETERMINE THE DELIVERED WATER TEMPERATURE TO EACH SAFETY FIXTURE. A COMFORTABLE RANGE IS 60°F TO 90°F (15°C TO 32°C). IN CIRCUMSTANCES WHERE A CHEMICAL REACTION IS ACCELERATED BY WATER TEMPERATURE, A MEDICAL ADVISOR SHOULD BE CONSULTED FOR THE OPTIMUM TEMPERATURE FOR EACH APPLICATION.

Specifications are subject to change without notice!

CAUTION! All thermostatic water mixing valves have limitations. They will NOT provide the desired accuracy outside of their flow capacity range. Consult the Flow Capacity Chart and DO NOT OVERSIZE. Minimum flow must be no less than indicated.
